Defect Fixes in this Release

1. When a token request is missing the refresh token, a 400 - Bad Request will be returned. Previously, a 500 exception error was returned.
2. Email for application inactivity being sent at wrong interval
3. In the UHC Provider Directory, under the Practitioner-Qualification area, the extension attribute was missing the property validcode. Updated the mapping file to fix this issue.

Known Issues in this Release

1. No issues to report in this release
